ORBIT GAMES

LAMPIÃO & MARIA BONITA

THE LEGEND OF THE SERTÃO

GAME DESIGN DOCUMENT

Version 1.0 | Proposed flagship video slot | Desktop & mobile

Concept
A premium Brazilian historical-adventure slot inspired by the Cangaço and the landscapes, music and material culture of Brazil's Northeast. The game combines a 5×3 base slot with three distinct bonus experiences, three separate Bonus Buy entry options and two random base-game events.

DESIGN STATUS: PROPOSAL — NOT A CERTIFIED MATHEMATICAL MODEL

Document guide

This document consolidates the proposed game rules and production architecture. Numerical values are initial targets only. The final paytable, probabilities, RTP, volatility and maximum win must be produced and validated by the game mathematician and certification process.

Section	Contents
1. Game configuration	Core setup and design targets
2. Symbols	Fourteen-symbol architecture
3. Bonus features	The Great Escape, The Hideout, The Last Stand
4. Bonus Buy	Three independent purchase options
5. Random events	Lampião's Arrival and The Cangaceiros' Raid
6. Mathematics	RTP allocation, volatility and modelling requirements
7. Game flow	Player journey and simultaneous trigger handling
8. Technical architecture	Engine modules, RNG, ledger and recovery
9. Art and audio	Visual direction and soundtrack
10. Production plan	Development phases and decisions to lock

Important implementation boundary

The frontend must never decide winning outcomes. The authoritative outcome, random selections, multipliers, prize values and wallet transactions must be generated and validated by the server-side or certified game-math/RNG architecture. This specification is a design brief, not evidence of certification or regulatory approval.

1. Core game configuration

Parameter	Proposed specification
Reels / rows	5 reels × 3 rows
Paylines	25 fixed paylines
Winning direction	Left to right
Target RTP	96.20% (unvalidated target)
Volatility	High overall; feature-specific targets below
Target maximum win	10,000× total bet (unvalidated target)
Regular symbols	10
Special symbols	4
Bonus experiences	3
Bonus Buy options	3 separate options
Random base-game events	2
Platforms	Desktop and mobile

The final mathematical model must be independently simulated and certified where required.

2. Symbol architecture

The game uses 14 symbols divided into premium symbols, low-paying symbols and special symbols. The visual language must make regular Lampião and Lampião Wild immediately distinguishable.

Category	Symbol	Role / function
Premium	Lampião portrait	Highest regular payout
Premium	Maria Bonita portrait	Second-highest regular payout
Premium	Cangaceiro leather hat	Premium symbol
Premium	Cartucheira	Premium symbol
Premium	Revolver	Premium symbol
Premium	Sanfona	Premium symbol
Low-paying	Crossed rifles	Low-paying symbol
Low-paying	Facão	Low-paying symbol
Low-paying	Mandacaru cactus	Low-paying symbol
Low-paying	Cantil	Low-paying symbol
Special	Lampião Wild	Substitutes for regular paying symbols
Special	Wanted Poster	Triggers The Great Escape
Special	Hideout Map	Triggers The Hideout
Special	Cangaceiro Emblem	Triggers The Last Stand

Visual rule: Lampião’s regular premium portrait is a close character portrait. His Wild uses a different pose, lighting and distinctive golden frame so players can recognize it instantly.

3. The three bonus experiences

Each bonus must feel like a different game mode, not the same Free Spins feature with a different animation.

A. THE GREAT ESCAPE — Free Spins

Concept: Lampião and Maria Bonita escape through the sertão. The reels remain visible while the setting changes to a dramatic sunset landscape.

Wanted Posters landed	Award
3	10 Free Spins
4	12 Free Spins
5	15 Free Spins

Mechanics

• Expanding Lampião Wild: Lampião Wild can appear and expand vertically to cover an entire reel. It substitutes for regular paying symbols. An expanding Wild that contributes to a win activates the Escape Multiplier.
• Escape Multiplier: starts at 1×. Every qualifying winning spin increases it by +1×; it applies to subsequent qualifying wins and remains active for the feature. Proposed cap: 10×.
• Cangaceiro Raid: randomly, one or more reels become Wild reels. The event does not consume an extra spin.
• Retrigger: 3 or more Wanted Posters award 5 additional spins. The multiplier is retained. Maximum spins and total win are controlled by the math model.

Presentation: Sunset, dust, movement, leather details and animated character entrances; energetic regional music.

B. THE HIDEOUT — Interactive Pick Bonus

Concept: The player discovers the cangaceiros' secret hideout. This is an interactive selection game, not another reel-spin round.

Trigger: 3 or more Hideout Map symbols.

Gameplay: Show 12 covered chests; the player receives 3 selections. Each chest contains a randomly determined reward.

Possible reward	Function
Gold coins	Instant cash prize
Gold multiplier	Multiplies the bonus award
Extra selection	Allows another choice
Lampião's treasure	Large fixed-multiplier prize
Maria's medallion	Special multiplier upgrade
Empty chest	No additional reward

The Couple's Fortune: a rare combination consists of Lampião's treasure and Maria's medallion. Collecting both unlocks an additional reward.

Rules: 3 initial selections; extra selections may be awarded; all previously earned prizes are retained; no player decision can erase an already-earned reward; the feature ends when the selection limit is reached.

Presentation: Dark wood, warm lantern lighting, antique chests, gold reflections and intimate sound effects.

C. THE LAST STAND — Hold & Respin

Concept: The cangaceiros gather their hidden fortune before their final journey through the sertão. This is the high-volatility bonus.

Trigger: 3 or more Cangaceiro Emblems. The player enters a dedicated 5×3 grid with 3 respins, initially empty positions, collectible gold symbols, special multiplier symbols and a maximum prize limit.

Mechanics:
• Gold Collection: landed gold symbols lock in place. Each new gold symbol resets the counter to 3. If no new gold symbol lands, the counter decreases.
• Multiplier Symbols: 2×, 3×, 5× or 10×. The final collected prize is multiplied according to the predefined math model.
• Lampião's Emblem: rare symbol that upgrades the bonus multiplier or awards additional collectible positions.
• Full Grid Reward: filling all 15 positions awards the Grand Treasure reward.

End conditions: all 3 respins are exhausted; all 15 positions are filled; or the maximum win cap is reached. The player receives the total accumulated prize.

Presentation: Dramatic canyon, darker lighting, powerful percussion and metallic effects.

3. Bonus comparison

Feature	Game mode	Main attraction	Trigger
The Great Escape	Free Spins	Expanding Wilds + escalating multiplier	3+ Wanted Posters
The Hideout	Interactive pick	Choose hidden rewards in chests	3+ Hideout Maps
The Last Stand	Hold & Respin	Locking collectibles + multipliers	3+ Cangaceiro Emblems

4. Bonus Buy architecture

Each bonus has its own purchase option accessible directly from the main game. The prices below are illustrative multiples of the current total bet, not approved prices.

Purchase option	Illustrative price	Description
THE GREAT ESCAPE	100×	10–15 Free Spins with expanding Wilds and escalating multipliers.
THE HIDEOUT	60×	Choose hidden chests and discover cash prizes and multipliers.
THE LAST STAND	200×	Enter the high-volatility Hold & Respin experience.

Purchase rules

1. The player must have sufficient balance.
2. The purchase price is deducted immediately after confirmation.
3. The game generates a valid feature outcome using the appropriate bonus mathematics.
4. The feature starts immediately.
5. The game records the purchase, stake, outcome and payout.
6. The player returns to the base game after the feature ends.

Required safeguards: maximum permitted Bonus Buy stake; bet-level restrictions; purchase confirmation to prevent accidental clicks; market-specific configuration to disable Bonus Buy where required; clear disclosure of purchase cost and RTP.

Bonus Buy must not guarantee a high payout. Each feature's RTP, volatility and prize distribution must be modelled separately.

5. Base-game random events

The base game should remain engaging even when a bonus is not triggered. Two RNG-controlled events add variety; their payout contribution must be included in base-game RTP.

Event 1 — LAMPIÃO'S ARRIVAL

At random intervals, Lampião appears on the reels. Possible effects: one reel transforms into a Wild reel; in a rarer event, two reels transform into Wild reels; regular symbols on selected reels are replaced by Wilds. Use a distinctive musical cue and a short character animation.

Event 2 — THE CANGACEIROS' RAID

A group of cangaceiros appears and transforms selected symbols. Possible effects: two or more low-paying symbols transform into the same premium symbol; a selected reel receives a symbol upgrade; or, rarely, several symbols upgrade simultaneously. These are RNG-controlled game features, not purely decorative animations.

6. Mathematics architecture

Proposed overall theoretical RTP target: 96.20%. The original design brief described a proposed allocation across the base game and three naturally triggered bonuses, but did not provide numeric percentages for each component. The

allocation must therefore be determined by the mathematician rather than guessed.

Bonus Buy economics must be modelled as a separate entry mode, without double-counting bonus payouts.

Component	What must be calculated
Base game	Symbol weights, paylines, hit frequency
Wild	Appearance frequency and substitution value
Scatter	Trigger probability and bonus frequency
Great Escape	Spin count, Wild frequency, multiplier distribution
Hideout	Prize distribution and selection probabilities
Last Stand	Collection frequency, respin distribution, full-grid probability
Bonus Buy	Purchase RTP and payout distribution
Random events	Event probability and RTP contribution

Volatility targets: Base game — high; Great Escape — high; Hideout — medium-to-high; Last Stand — extreme.

The 10,000× maximum win is a development target, not a guaranteed achievable outcome until simulations validate it. The final maximum win must be capped consistently across every entry route.

7. Complete game flow

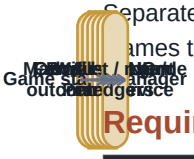
Base-game loop: spin → evaluate wins → resolve any RNG-controlled random event → check bonus triggers → award and resolve any triggered bonus → return to the base game.

Simultaneous bonus triggers

If multiple bonus triggers land in the same spin, the game must have a defined award policy. Proposed rule: show a bonus-selection screen and let the player choose one of the triggered features. Unselected features are not carried over. This rule must be included in the mathematical model.

8. Technical architecture

Separate the game engine, mathematical engine and presentation layer so modules can be reused in future Orbit Games titles.



Required modules

Module	Responsibility
Game State Manager	Controls game progression and state
Math Engine	Calculates outcomes and payouts
RNG Service	Generates random outcomes
Base Game Engine	Reels, symbols, paylines and wins
Bonus Manager	Routes and manages bonus features
Great Escape Module	Free Spins logic
Hideout Module	Pick-game logic
Last Stand Module	Hold & Respin logic
Bonus Buy Manager	Purchase validation and entry
Random Event Manager	Controls random base-game features
Wallet / Ledger	Stakes, debits, credits and reconciliation
Animation Controller	Connects outcomes to visual animations

Technical requirements

• Frontend never determines the actual winning outcome.
• Authoritative outcomes, random selections, multipliers, prizes and wallet transactions are generated and validated server-side or through the certified game-math/RNG architecture.
• Frontend receives outcomes and renders them.
• Every round records a unique round ID, bet amount, selected feature/purchase type, RNG/outcome reference, symbol grid or bonus state, win calculation, balance before and after, and completed/pending transaction status.
• Implement recovery logic for interrupted connections, especially during Bonus Buy and active bonus rounds.

Production note

A local demo can use a clearly labelled simulated wallet and non-certified random outcomes for development and QA. Do not connect real-money deposits, withdrawals or wagering until the applicable legal, security, responsible-gambling and independent certification requirements are met.

9. Visual and audio production direction

Area	Visual / audio direction
Main game	Warm sunset, dusty village, rocky mountains, mandacaru cactus and wooden architecture.
The Great Escape	Dynamic sunset, moving dust, dramatic character animations and energetic regional music.
The Hideout	Dark wood, lanterns, antique chests, gold reflections and intimate sound effects.
The Last Stand	Dramatic canyon, darker lighting, powerful percussion and metallic effects.

Soundtrack inspiration: original music inspired by Forró and Baião, accordion and zabumba, triangle percussion, traditional northeastern rhythms and cinematic orchestral elements. Each bonus should have its own musical identity while retaining a recognizable main theme.

10. Development roadmap

Phase	Deliverables
1. Game design	Final rules, paytable, symbols and feature specification
2. Mathematics	RTP model, simulations, volatility and Bonus Buy prices
3. Art production	Symbols, backgrounds, character artwork and animations
4. Core development	Reels, paylines, wallet integration and game states
5. Bonus development	Three bonuses, Bonus Buy and random events
6. QA and certification	Simulation verification, device testing, recovery and compliance

11. Decisions to lock before development

The following items are intentionally open and must be approved by design, mathematics and production before release:

1. Exact bonus trigger probabilities.
2. Exact Bonus Buy prices.
3. Final multipliers and maximum win.
4. Whether the Hideout uses 12 chests or a larger selection board.
5. Whether Last Stand has a progressive multiplier or fixed-value collectible prizes.
6. How simultaneous bonus triggers are awarded.
7. Whether Bonus Buy is available in each target market.

Do not let the frontend developer invent these mechanics during implementation. Define them in game configuration and the math specification first.

12. Recommended production scope

Scope item	Count / target
Base symbols	14
Bonus games	3
Bonus Buy options	3
Random events	2
Reel configuration	5×3
Target maximum win	10,000× (unvalidated)

Core selling points

• Three fundamentally different bonus experiences.
• Separate Bonus Buy option for each experience.
• Character-driven Wild mechanic.
• Interactive treasure selection.
• Hold & Respin feature.
• Brazilian visual and audio identity rooted in the Northeast.

Recommended implementation order

1. The Great Escape — establish the main slot and Wild mechanics.
2. The Hideout — develop the interactive bonus as a separate game screen.

3. The Last Stand — develop the Hold & Respin engine.
4. Bonus Buy integration for all three.
5. Random events and final polish.

Build the three bonuses as independent modules. Future Orbit Games titles can then reuse the Hold & Respin engine or interactive pick-game engine without rebuilding them from scratch.

END OF GAME DESIGN DOCUMENT

Prepared from the supplied Lampião & Maria Bonita game-design proposal. All numerical and commercial parameters remain subject to mathematical validation, legal review and certification.
